Matheus Felipe Correa MatheusFelipeCorrea

Objectives

I am a **Full-Stack Developer in training**, passionate about technology and design, focused on creating efficient and visually appealing solutions. My main experience is with **Next.js, React, Node.js, Bootstrap, and Tailwind CSS**, applying this knowledge to academic and personal projects.
I apply **CRUD, UX**, and software architecture patterns, relying on best practices such as **Nielsen's Heuristics**, and I have experience with **PostgreSQL and MySQL** databases. Currently, I am pursuing a degree in **Software Engineering at PUC Minas** and I am constantly seeking to improve my skills.
I believe that technology and creativity solve complex problems and create impactful experiences. I maintain an **active portfolio on GitHub**, and I enjoy working in collaborative teams and challenging environments that encourage continuous learning and innovation.

Educational background

PUC Minas - Coração Eucarístico, Software Engineering — 2024-2028

- Creation of high-quality, reliable, and efficient software, within controlled timelines and budgets.

Zion, Graphic Design — Aug/2022

- Solve communication problems by using visual elements such as images, colors, typography, and layout to convey a clear and impactful message to a specific audience.

Experiences and Freelancer Projects

Tektra Rastreamento e Meio Ambiente, Operational Management and Support, Web Development and Design — 2017 – Currently

- Acting in operational support and monitoring of the company's activities.
- Creation of the visual identity and design of the institutional logo.
- Development of the official homepage of Tektra Tracking, with a focus on usability and visual communication.
- Responsible for social media management, content planning and digital engagement strategies.

Vellozia Consultoria e Meio Ambiente, Graphic Design — Jan 2025 – Feb 2025

- Creation of the company's visual identity and logo design, aligned with the sustainability and environmental consulting proposal.

Academic Research

Segurança na Injeção de Dependência: Melhores Práticas em Sistemas Orientados a Objetos — Jun 2025

Matheus Felipe Correa, Henrique Fialho

Link

Programming Projects

Hackathons Universitários Link

- I developed a system in Java using the Singleton pattern for the complete management of a Hackathon. The project includes team formation, project assignment, judge selection, and automatic generation of the final score, as well as a list of approved projects.
- The project uses **OOP**, **Java** and the **Singleton pattern**.

XuBank Link

- I jointly built a banking system in Java for a fictional fintech, covering customer registration, different account types, and specific guidelines for fees, earnings, and transactions.
- I used **OOP** and **Java**.

Java Parkings Link

- I helped create a Java system that manages the operations of a parking lot, addressing challenges such as the lack of spaces in high-demand areas.
- The project was developed with **Java**, **OOP**, **MySQL** e and the pattern **MVC**.

AtenasBuffet Link

- I contributed to an academic project aimed at solving organizational issues that buffets face when using limited or manual methods like WhatsApp for their operations.
- The project was carried out with **MySQL**, **Java**, **Postman**, **Spring Boot** and **MVC**.

BeautyOn Link

- I participated in an academic project aimed at facilitating the management of a salon, covering the management of employees, services, schedules, and financial information.
- I used **Next.js**, **PostGres** and **Prisma**.

BudgetBuddy Link

- I was part of an academic project focused on personal finance management, using **LocalStorage** for information storage and allowing users to track their balances, due dates, spending by category, and detailed charts of their monthly income without a database.

Technical Skills

Programming Languages: C, C++, C, Swift, Java, Python.

Frontend: HTML5, CSS3, JavaScript, React, Next.js, Bootstrap, Tailwind CSS, Chart.js, WordPress.

APIs and Backend:APIs RESTful, Node.js, .NET.

Data Base: PostgreSQL, MySQL, Azure SQL.

Version Control and Collaboration: Git, GitHub, GitHub Projects, GitLab.

API and Testing Tools: Postman, JUnit, Swagger.

Design and Productivity: Pacote Adobe, Figma, Pacote Office, Trello, ToDoist, Jira.

Concepts and Practices: Authentication, Data Structures, Algorithms, Object-Oriented Programming (OOP), Software Architecture, SOLID Principles, Unit Testing, Agile Methodologies (Scrum and Kanban), DevOps.

Languages: Portuguese (Native), English (Advanced), Spanish (Intermediate).
